EDUCATION

Syracuse University, Syracuse, NY

Aug 2022 - May 2024

Master of Science, Major in Computer Science | GPA: 3.7

Savitribai Phule Pune University, Pune, INDIA

Aug 2017 - May 2021

Bachelor of Engineering, Computer Science | GPA: 8.3

EXPERIENCE

Software Developer Intern - Series

June 2024 - Present

- Executed a high-performance data migration from MongoDB to Firestore, utilising robust ETL processes to ensure data integrity and schema consistency during the transition.
- Designed and deployed an AI-driven conversational agent using OpenAI Playground, utilising language models and fine-tuning techniques and integrated the bot into a Flutter application via RESTful APIs and WebSocket protocols.
- Engineered custom workflows in Google Cloud Functions to replace third-party solutions, leveraging GCP for orchestration and employing Google Cloud monitoring tools to track and optimise processing latency, reducing processing time by 40%.

Assistant Software Engineer - Persistent Systems MediaAgility

Aug 2021 - Apr 2022

- Enhanced stock data retrieval by implementing date range filtering and pagination using RESTful APIs, optimising PostgreSQL queries for efficient data handling, resulting in a 25% improvement in query performance.
- Designed and implemented a portfolio price alert system using WebSocket communication and event-driven architecture, with Redis for message queuing and real-time processing, enabling instant notifications for user-defined target prices.
- Optimised historical data access in the stock price microservice by refactoring SQL queries and leveraging database indexing, resulting in 20% faster data retrieval while ensuring backward compatibility with existing API consumers.

Software Intern - JeevanVidya

June 2020 - Nov2020

- Engineered a dynamic course scheduling system using ReactJS and React Hooks, enabling real-time updates and interactive UIs with efficient rendering for course bookings and management.
- Designed and implemented responsive card layouts with Bootstrap, employing CSS Grid and Flexbox for precise control over course details display, including timing, location, target audience, and contact information, across diverse screen resolutions.
- Integrated a course booking feature with a streamlined transition to the payment page using ReactJS, simplifying the process by replacing manual form filling with a single-click booking button, leveraging API calls and client-side validation.

TECHNICAL PROJECTS

Library Management System - PERN stack based project [\[Github\]](#)

May 2024

- Developed a full-featured system with role-specific functionalities, utilising Role-Based Access Control (RBAC) to ensure that librarians can manage book records while students can perform checkouts, sorting, filtering, and efficient role management.
- Implemented the frontend with React and hooks for state management, securing user authentication and access with JWT tokens, OAuth for third-party login, and BCrypt for password hashing, while ensuring robust API interactions using Axios.
- Engineered the backend with PostgreSQL and an ORM structure for scalable database management and clean data interactions, wrote over 50 test cases, achieving 95% test coverage to ensure application reliability and maintainability.

OptiLens - Android based application to shop eyewear [\[Github\]](#)

Dec 2023

- Developed an android application for eyewear shopping, implementing a modern UI with Android libraries like Glide for efficient image loading and display, and Firebase for real-time data storage and secure user authentication.
- Integrated Google Maps API for precise store location tracking and distance calculation from the user's address, and incorporated Stripe for secure and seamless payment processing.
- Implemented secure password protection, with Firebase Firestore for real-time notifications and offline data sync, using Material Design and Android Jetpack for a scalable, user-friendly interface.

Reddit WallStreetBets Sentiment Analysis [\[Github\]](#)

Nov 2023

- Implemented sentiment analysis using VADER with NLTK's Sentiment Intensity Analyzer for sentiment scoring, and built a custom LSTM model with TensorFlow/Keras, incorporating GloVe embeddings for vectorization, to enhance sentiment classification accuracy and integrate into a Python-based analysis pipeline.
- Conducted time-series sentiment analysis using Pandas for data manipulation and Matplotlib for trend visualisation, tracking sentiment scores and post frequencies to correlate with stock price movements and identify sentiment-driven market trends.

TECHNICAL SKILLS

- Programming Languages:** Java, Python, JavaScript, TypeScript, C++, HTML5, CSS3, Kotlin, C
- Database Technologies:** MongoDB AtlasSQL, PostgreSQL, SQL, MySQL, Firestore, Firebase Realtime Database
- Frameworks:** React JS, Vue JS, Express Js, Spring Boot, Django, React Native, Ruby, Angular, Flutter
- Test Tools and Libraries:** Jest, Selenium, Git, TensorFlow, PyTorch, Keras, scikit-learn, Pandas
- Cloud, DevOps:** Docker, Ansible, Jenkins, AWS (Basics), AWS Architectures and Services, CI/CD, Kubernetes
